

## Classification Poster

Step 1 – Choose a specific organism: \_\_\_\_\_  
(ex: “Common Squirrel Monkey” instead of just “Monkey”)

Step 2 – Research the taxonomy of this organism. Use an encyclopedia or internet resources to find the following groupings to which this organism belongs:

Kingdom: \_\_\_\_\_

Phylum: \_\_\_\_\_

Class: \_\_\_\_\_

Order: \_\_\_\_\_

Family: \_\_\_\_\_

Genus: \_\_\_\_\_

Species: \_\_\_\_\_

Step 3 – Type the information that you have found (remember how to properly write the Genus species) and mount it on poster paper no smaller than 14” x 17”. Find two or more pictures of your organism and add them to your poster.

### Project requirements & Rubric:

- Must include at least 2 pictures. - 5 Points
- Must include each of the organism’s levels of classification. - 14 Points
- Common name and scientific name (written properly) must be highly visible on the poster.  
- 16 Points
- Must be neat with no spelling/grammar errors. - 5 Points
- Include at least one unique/interesting fact about the species that you chose **and** where this species is found. - 10 Points

This project will lose 5 points for every day it is late. This project is due on \_\_\_\_\_.
